Change log

V0.1:

- initial release.

V0.2:

- AIRENCE_SWITCH_CHANGE_EVENT augmented with USB Channel controls (faderstart, ON, CUE switches).

V0.3:

- AIRENCE_LED_ON_WRITE renamed to AIRENCE_LED_WRITE.
- AIRENCE_LED_OFF_WRITE command is obsolete, instead use AIRENCE_LED_WRITE.
- AIRENCE_LED_ON_EVENT renamed to AIRENCE_LED_EVENT
- AIRENCE_LED_OFF_EVENT command is obsolete, instead AIRENCE_LED_EVENT is used.
- commandID 0x02 AIRENCE_LED_ON renamed to AIRENCE_LED
- commandID 0x04 AIRENCE_LED_OFF is obsolete.
- wrap around functionality of encoder value added.

V0.4:

- non-stop switch added to AIRENCE_SWITCH_CHANGE_EVENT

V0.5:

- bug fix: AIRENCE_SWITCH_CHANGE_EVENT *size* field corrected from 6 to 8.
- AIRENCE_SWITCH_CHANGE_REQUEST added
- AIRENCE_SWITCH_CHANGE_RESPONSE added
- commandID 0x04, AIRENCE_LED_ALL added
- AIRENCE_LED_ALL_WRITE added
- AIRENCE_LED_ALL_EVENT added

1. Introduction

This document describes the protocol which is used to communicate with the control section and the USB Channel controls of the Airence USB mixing console. For the communication between the PC (host) and Airence (device) the USB generic HID (Human Interface Device) class protocol is used. HID devices are identified by their PID and VID. For the Airence the **PID=0x2402**, and the **VID=0x03EB**. On top of the HID protocol, a custom message based protocol provides the commands to send and receive data which will be described in more detail in this document.

1.1 Control module

Switches

The control section of the Airence USB contains 24 switches which all have free assignable functionality. The switches are numbered from 1 to 24 as can be seen in figure 1. This numbering will be used in software to determine which switch is pressed/released.

Each switch contains a label which easily can be changed to customer needs. In such a way the control section can be customized with meaningful labels to control any software application on the PC.

LEDs

Behind each switch there is a multicolor LED to indicate any action or event. The LEDs can illuminate red, green, and yellow. With this feature one can indicate many different actions behind one switch which allows multifunctionality of the switches.

Furthermore the LEDs behind the switch are also numbered with the same numbering as the switches. For flexibility reasons the LEDs are not assigned to the switch they are placed behind. Instead they can be assigned/controlled freely. For example, switch 12 controls LED 2.

The LEDs can have the following states: ON, OFF, BLINKING.

Encoder

On top of the control section there is a rotary encoder located which can be used to adjust parameter values of the controlled application.

Figure 1. Airence control section

1.2 USB Channel Controls

In the Airence there are four USB channels available which can be used to send and receive a total of 4 stereo pairs to and from the PC. Only on these four USB channels the faderstart, ON, and CUE switch signals are transmitted to the PC using the Airence USB HID Control Protocol. These can be monitored by any playback software to trigger a specific function.

2. Message format

Transmitting data through the USB bus using the HID class protocol is done by reports. A report always contains an ID and the data inside the report. In order to successfully communicate with the Airence control section ***only reportID 0*** may be used. More information about report descriptors can be found on www.usb.org. For now, remember that the Airence only will listen to reports with reportID = 0.

A control message has a fixed size of 8 bytes containing a *SIZE* byte, *COMMAND* byte, and a *PAYLOAD* section of maximal 6 bytes. The *SIZE* byte contains the number of bytes used (max. 8) in the message, including this *SIZE* byte.

2.1 Command byte

The command byte consists of a 2-bit *TYPE* and a 6-bit *ID* field.

| Bit | Symbol | Value | Description |
|-----|--------|-------|--|
| 5:0 | ID | - | Command Identifier (ID) |
| 7:6 | TYPE | 00 | Write command, from host to device |
| | | 01 | Request command, from host to device |
| | | 10 | Response command, reply from device to host on a request |
| | | 11 | Event, from device to host (i.e. button pressed) |

Command ID

A commandID can have a value between 0x01 and 0x3F. The following commandIDs are currently available in the Airence:

| Value | Description |
|-------|---------------------------|
| 0x01 | AIRENCE_FIRMWARE_VERSION |
| 0x02 | AIRENCE_LED |
| 0x03 | AIRENCE_LED_BLINK |
| 0x04 | AIRENCE_LED_ALL |
| 0x05 | AIRENCE_SWITCH_CHANGE |
| 0x06 | AIRENCE_ENCODER_INCREMENT |
| 0x07 | AIRENCE_ENCODER_DECREMENT |

3. Messages

3.1 Write

A message of the type *WRITE* is transmitted from the PC to Airence. The message is intended to perform an action on the Airence control section (i.e. illuminate a LED). If the action is correctly executed, the Airence will reply with a corresponding event.

AIRENCE_LED_WRITE

| | | | | | | | | |
|-------|-------------|----------------|----------------|-------|---|---|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x04 | 0x02 | lednum | color | - | - | - | - |

| Byte | Symbol | Value | Description |
|------|---------|-------|--|
| 0 | SIZE | 0x04 | Message size |
| 1 | COMMAND | 0x02 | AIRENCE_LED_WRITE |
| 2 | lednum | | LED number, 1(0x01) to 24(0x18), 0xFF = ALL LEDs |
| 3 | color | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |

AIRENCE_LED_BLINK_WRITE

| | | | | | | | | |
|-------|-------------|----------------|----------------|----------|-----------|-------|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x06 | 0x03 | lednum | color_on | color_off | speed | - | - |

| Byte | Symbol | Value | Description |
|------|-----------|-------|--|
| 0 | SIZE | 0x06 | Message size |
| 1 | COMMAND | 0x03 | AIRENCE_LED_BLINK_WRITE |
| 2 | lednum | | LED number, 1(0x01) to 24(0x18), 0xFF = ALL LEDs |
| 3 | color_on | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |
| 4 | color_off | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |
| 5 | speed | 0x00 | SLOW |
| | | 0x01 | NORMAL |
| | | 0x02 | FAST |

AIRENCE_LED_ALL_WRITE

| | | | | | | | | |
|-------|-------------|----------------|----------------|--------|---------|----------|----------|----------|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x08 | 0x04 | LD4..1 | LD8..5 | LD12..9 | LD16..13 | LD20..17 | LD24..21 |

| Byte | Symbol | Value | Description |
|------|----------|-------|--|
| 0 | SIZE | 0x08 | Message size |
| 1 | COMMAND | 0x04 | AIRENCE_LED_ALL_WRITE |
| 7:2 | LD[m..n] | - | bit 1:0 LED[n] color 00 = NONE (LED off) 01 = RED 10 = GREEN bit 7:6 LED[m] color 11 = YELLOW |

3.2 Request

A message of the type *REQUEST* is transmitted from the PC to Airence. The message is intended to read data from the Airence. After the Airence received the request it will respond with a corresponding *RESPONSE* message. Therefore, a *REQUEST* message always forms a pair with a *RESPONSE* message.

AIRENCE_FIRMWARE_VERSION_REQUEST

| | | | | | | | | |
|-------|-------------|----------------|----------------|---|---|---|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x02 | 0x41 | - | - | - | - | - | - |

| Byte | Symbol | Value | Description |
|------|---------|-------|----------------------------------|
| 0 | SIZE | 0x02 | Message size |
| 1 | COMMAND | 0x41 | AIRENCE_FIRMWARE_VERSION_REQUEST |

AIRENCE_SWITCH_CHANGE_REQUEST

| | | | | | | | | |
|-------|-------------|----------------|----------------|---|---|---|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x02 | 0x45 | - | - | - | - | - | - |

| Byte | Symbol | Value | Description |
|------|---------|-------|-------------------------------|
| 0 | SIZE | 0x02 | Message size |
| 1 | COMMAND | 0x45 | AIRENCE_SWITCH_CHANGE_REQUEST |

3.3 Response

A message of the type *RESPONSE* is transmitted from the Airence to the PC when prior a request message was received.

AIRENCE_FIRMWARE_VERSION_RESPONSE

| | | | | | | | | |
|-------|-------------|----------------|----------------|-------|---|---|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x04 | 0x81 | major | minor | - | - | - | - |

| Byte | Symbol | Value | Description |
|------|---------|-------|-----------------------------------|
| 0 | SIZE | 0x04 | Message size |
| 1 | COMMAND | 0x81 | AIRENCE_FIRMWARE_VERSION_RESPONSE |
| 2 | major | | Firmware major revision |
| 3 | minor | | Firmware minor revision |

AIRENCE_SWITCH_CHANGE_RESPONSE

| | | | | | | | | |
|-------|-------------|----------------|----------------|---------|----------|------------|---------|---------|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x08 | 0x85 | sw_8_1 | sw_16_9 | sw_24_17 | sw_enc_non | usb_2_1 | usb_4_3 |

| Byte | Symbol | Value | Description |
|------|------------|-------|--|
| 0 | SIZE | 0x06 | Message size |
| 1 | COMMAND | 0xC5 | AIRENCE_SWITCH_CHANGE_RESPONSE |
| 4:2 | sw_m_n | - | bit 0: switch n (1=pressed, 0=released) bit 7: switch m |
| 5 | sw_enc_non | - | bit 0: encoder switch (1=pressed, 0=released) bit 1: non-stop switch (1=pressed, 0=released) |
| 6 | usb_2_1 | - | bit 0: USB1 faderstart (1=ON, 0=OFF) bit 1: USB1 ON (1=pressed, 0=released) bit 2: USB1 CUE (1=pressed, 0=released) bit 3: USB2 faderstart (1=ON, 0=OFF) bit 4: USB2 ON (1=pressed, 0=released) bit 5: USB2 CUE (1=pressed, 0=released) |
| 7 | usb_4_3 | - | bit 0: USB3 faderstart (1=ON, 0=OFF) bit 1: USB3 ON (1=pressed, 0=released) bit 2: USB3 CUE (1=pressed, 0=released) bit 3: USB4 faderstart (1=ON, 0=OFF) bit 4: USB4 ON (1=pressed, 0=released) bit 5: USB4 CUE (1=pressed, 0=released) |

3.4 Events

A message of the type *EVENT* is transmitted from the Airence to the PC. An event will be generated when the state of a switch , encoder, or LED has changed. These events can be used to synchronise states of LEDs and switches between the Airence and the controlled application on the PC.

AIRENCE_LED_EVENT

| | | | | | | | | |
|-------|-------------|----------------|----------------|-------|---|---|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x04 | 0xC2 | lednum | color | - | - | - | - |

| Byte | Symbol | Value | Description |
|------|---------|-------|--|
| 0 | SIZE | 0x04 | Message size |
| 1 | COMMAND | 0xC2 | AIRENCE_LED_EVENT |
| 2 | lednum | | LED number, 1(0x01) to 24(0x18), 0xFF = ALL LEDs |
| 3 | color | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |

AIRENCE_LED_BLINK_EVENT

| | | | | | | | | |
|-------|-------------|----------------|----------------|----------|-----------|-------|---|---|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x06 | 0xC3 | lednum | color_on | color_off | speed | - | - |

| Byte | Symbol | Value | Description |
|------|-----------|-------|--|
| 0 | SIZE | 0x06 | Message size |
| 1 | COMMAND | 0xC3 | AIRENCE_LED_BLINK_EVENT |
| 2 | lednum | | LED number, 1(0x01) to 24(0x18), 0xFF = ALL LEDs |
| 3 | color_on | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |
| 4 | color_off | 0x00 | NONE (LED off) |
| | | 0x01 | RED |
| | | 0x02 | GREEN |
| | | 0x03 | YELLOW |
| 5 | speed | 0x00 | SLOW |
| | | 0x01 | NORMAL |
| | | 0x02 | FAST |

AIRENCE_LED_ALL_EVENT

| | | | | | | | | |
|-------|-------------|----------------|----------------|--------|---------|----------|----------|----------|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x08 | 0xC4 | LD4..1 | LD8..5 | LD12..9 | LD16..13 | LD20..17 | LD24..21 |

| Byte | Symbol | Value | Description |
|------|----------|-------|--|
| 0 | SIZE | 0x08 | Message size |
| 1 | COMMAND | 0x04 | AIRENCE_LED_ALL_EVENT |
| 7:2 | LD[m..n] | - | bit 1:0 LED[n] color 00 = NONE (LED off) 01 = RED 10 = GREEN bit 7:6 LED[m] color 11 = YELLOW |

AIRENCE_SWITCH_CHANGE_EVENT

| | | | | | | | | |
|-------|-------------|----------------|----------------|---------|----------|------------|---------|---------|
| byte: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| | SIZE | COMMAND | PAYLOAD | | | | | |
| | 0x08 | 0xC5 | sw_8_1 | sw_16_9 | sw_24_17 | sw_enc_non | usb_2_1 | usb_4_3 |

| Byte | Symbol | Value | Description |
|------|------------|-------|--|
| 0 | SIZE | 0x06 | Message size |
| 1 | COMMAND | 0xC5 | AIRENCE_SWITCH_CHANGE_EVENT |
| 4:2 | sw_m_n | - | bit 0: switch n (1=pressed, 0=released) bit 7: switch m |
| 5 | sw_enc_non | - | bit 0: encoder switch (1=pressed, 0=released) bit 1: non-stop switch (1=pressed, 0=released) |
| 6 | usb_2_1 | - | bit 0: USB1 faderstart (1=ON, 0=OFF) bit 1: USB1 ON (1=pressed, 0=released) bit 2: USB1 CUE (1=pressed, 0=released) bit 3: USB2 faderstart (1=ON, 0=OFF) bit 4: USB2 ON (1=pressed, 0=released) bit 5: USB2 CUE (1=pressed, 0=released) |
| 7 | usb_4_3 | - | bit 0: USB3 faderstart (1=ON, 0=OFF) bit 1: USB3 ON (1=pressed, 0=released) bit 2: USB3 CUE (1=pressed, 0=released) bit 3: USB4 faderstart (1=ON, 0=OFF) bit 4: USB4 ON (1=pressed, 0=released) bit 5: USB4 CUE (1=pressed, 0=released) |

AIRENCE_ENCODER_INCREMENT_EVENT

byte: 0 1 2 3 4 5 6 7

| SIZE | COMMAND | PAYLOAD | | | | | |
|------|---------|-----------|---|---|---|---|---|
| 0x03 | 0xC6 | abs_value | - | - | - | - | - |

| Byte | Symbol | Value | Description |

| 0 | SIZE | 0x03 | Message size |
| 1 | COMMAND | 0xC7 | AIRENCE_ENCODER_DECREMENT_EVENT |
| 2 | abs_value | | Absolute encoder value [0 - 255] (wrap around) |

4. Test application

4.1 SimpleHIDWrite

For the integration of the Airence control protocol in your own application it can be very useful to have an application which provides simple write routines for HID devices in development stage. In this chapter the program SimpleHIDWrite will be used to show how to turn on a LED on the control section of the Airence. The used program can be downloaded from:

<http://www.lvr.com/hidpage.htm/>

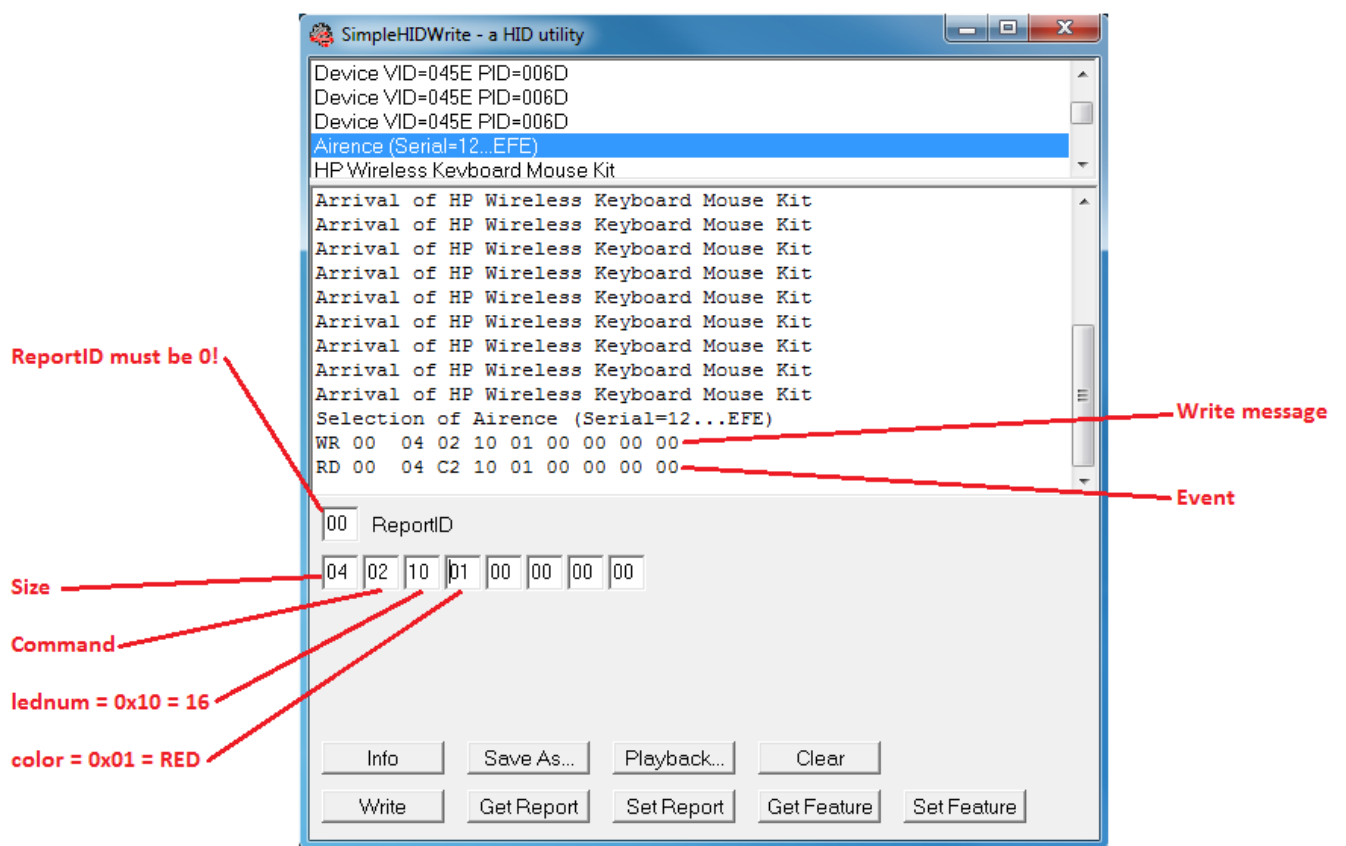

Figure 2. Generate a write message
